3

- The wireless communication device of claim 26, further comprising:
 display means of a second type, in addition to said light emitting means,
- 3 for displaying alphanumeric data.
- 1 28. The wireless communication device of claim 26, wherein the wireless
- 2 communication device comprises a wireless mobile phone.
- 1 29. The wireless communication device of claim 26, wherein the wireless
- 2 communication device comprises a wireless PDA.
- 1 30. A wireless communication device comprising:
- a machine accessible medium having stored thereon a plurality of
 - instructions, which when executed, cause the wireless communication device to
- 4 receive data representing a set of one or more picture elements of
- 5 an audience assisted image, the data transmitted to the mobile
- 6 communication device to facilitate coordinated display of a luminescent
- 7 representation of a portion of the audience assisted image by the mobile
- 8 communication device in cooperation with one or more additional mobile
- 9 communication devices, and
- 10 generate the luminescent representation based at least in part upon
- the received data; and
- 12 a processor to execute said instructions.

- 1 31. The wireless communication device of claim 30, further comprising
- 2 instructions to
- determine which of said set of picture elements are to be displayed by the
- 4 communication device and which of said set of picture elements are to be
- 5 displayed by said one or more additional mobile communication devices, if said
- 6 data represents more than one picture element.
- 1 32. The wireless communication device of claim 30, wherein said data is
- 2 received wirelessly from a communication server.
- 1 33. The wireless communication device of claim 32, wherein said data is
- 2 received based upon feedback provided by a user to the communication server.
- 1 34. The wireless communication device of claim 32, wherein said data is
- 2 received in digital form.
- 1 35. The wireless communication device of claim 30, wherein said data is
- 2 received through at least one of an electrical, a magnetic, and a mechanical
- 3 coupling.
- 1 36. The wireless communication device of claim 35, wherein said data is
- 2 received from an interchangeable covering equipped to be communicatively

- 40 -

3 coupled with said mobile communication device.

The wireless communication device of claim 30, wherein said plurality of 1 37.

2 instructions further comprise instructions to

illuminate in accordance with a predetermined pattern, one or more LEDs 3

disposed upon said mobile communication device to visually convey the set of

one or more picture elements.

The wireless communication device of claim 37, wherein at least a subset 1 38.

2 of the one or more LEDs illuminate in multiple colors.

The wireless communication device of claim 30, wherein said plurality of 39. 1

2 instructions further comprise instructions to generate a second luminescent

representation based at least in part upon the received data.

The wireless communication device of claim 30, wherein said plurality of 40. 1

instructions further comprise instructions to

receive second data representing a second set of one or more picture 3

elements, said second set of picture elements to facilitate coordinated display of

a second luminescent representation of a portion of a second audience assisted

image by the mobile communication device in cooperation with said one or more

additional mobile communication devices; and

generate the second luminescent representation based at least in part

- 41 -

upon the received second data. 9
